Criteria Condition Types

The more you use Query Manager, the more you are likely to refine queries with conditions other than the *Equal To* condition that is the default.

Between	The value in the selected record field falls between two comparison values. The range is inclusive.
Equal to	The value in the selected record field exactly matches the comparison value.
Exists	This operator is different from the others, in that it does not compare a record field to the comparison value. The comparison value is a subquery. If the subquery returns any data, Query Manager returns the corresponding row.
Greater than	The value in the record field is greater than the comparison value.
In list	The value in the selected record field matches one of the comparison values in a list.
In tree	The value in the selected record field appears as a node in a tree created with PeopleSoft Tree Manager. The comparison value for this operator is a tree or branch of a tree that you want PeopleSoft Query to search.
Is null	The selected record field does not have a value in it. You do not specify a comparison value for this operator. Key fields, required fields, character fields, and numeric fields do not allow null values.
Less than	The value in the record field is less than the comparison value.

Like	The value in the selected field matches a specified string pattern. The comparison value may be a string that contains wildcard characters. The wildcard characters that Query Manager recognizes are Percent(**%)** and Underscore (**_)** **%** matches any string of zero or more characters. For example, **C%** matches any string starting with C, including C alone. **_** matches any single character. For example, **_ones** matches any five-character string ending with *ones,* such as Jones or Cones.
